

What is the difference between LMCE and the Anatomy Master Classes?

There is a great deal of overlap between the content of **LMCE** and the **Anatomy Master Classes**. Here are the major differences.

**Learn Muscle Continuing Education (LMCE)** is a **VAST LIBRARY** of content meant for the student and manual/movement therapist/professional.

- LMCE has 34 folders that contain (at present) more than **2,500 video lessons** ranging in topics from fundamental anatomy and physiology to manual and movement therapy assessment and treatment techniques, and more.
- Not everything in the Master Classes is presently in LMCE, but most of the content is (in various folders). And, in time, all of the content will be.
- **10 new videos are added to LMCE each and every week.**
- LMCE has more than **250 hours of NCBTMB-approved Continuing Education (CE) credit** as part of the subscription.
- LMCE also allows the subscriber to becoming Certified in Clinical Orthopedic Manual Therapy (COMT) through online courses (and gain NCB CE credit).

**The Anatomy Master Classes** have portions of the content that LMCE has, but the content is organized in a **STRUCTURED FORMAT** that allows the subscriber to be a student and more easily work their way through the content in a methodical fashion.

- MAMC (Muscle Anatomy Master Class) has approximately **1,000 video lessons** and more than 90 hours of lecture presentations. MAMC has **66 hours of NCB (and NYS and NPCP) CE credit.**
- BAJAMC (Bone and Joint Anatomy Master Class) has more than **300 video lessons** and more than 70 hours of video lecture presentations.
- KMC (Kinesiology Master Class) has more than **100 hours of video lecture presentations** that teach human anatomy and movement from square zero to a great depth of content.
- VAMC (Visceral Anatomy Master Class) covers the essential visceral anatomy with more than **16 hours of video lecture presentations.**
